System Development Charges and School Excise Tax

WATER AND SANITARY SYSTEMS DEVELOPMENT CHARGES are based on the size of the water meter required. Most single family homes use a 3/4 inch meter.

STORMWATER SYSTEM DEVELOPMENT CHARGES are based on the amount of new impervious surface, including driveways, sidewalks and streets in new subdivisions. An average impervious surface of 3,500 square feet is used for new single family homes on a street constructed after 2009.

The following **PARKS, TRANSPORTATION, and STORMWATER SDCs** are based on a **New Single Family Residential** unit. **Commercial Transportation and Stormwater SDCs are calculated on a case by case basis. There is no Parks SDC assessed to commercial developments.**
